

“Are Your Bollards and Barriers Reliable?”

Loss Prevention Systems, Inc. has been maintaining and repairing the Navy's bollards/barrier systems for 2 years. Our contributions to the Navy have ensured the continuous safety and security offered by effective bollard/barrier systems. We currently provide the Navy with system engineering and the planning of equipment selection and procurement as it relates to bollards and barriers. In addition, we install, test and commission hardware, and procure and distribute manuals and technical documents. We are diligent in sustaining and integrating systems and equipment to ensure their reliability and longevity.

Our detailed inspections, reports and effective communication with the Navy have helped to make this program successful. We spend a lot of resources on preventative maintenance and are quick to respond to any problems. We are also acutely aware of the peripheral effects our work has on surrounding areas, and add security measures and traffic considerations as necessary while repair work is in process.

“I appreciate the outstanding work that you and your crew have been doing for the Navy Southwest. Your exceptional attention to detail is very impressive and I am glad to see these barriers are all back up and running. Thanks again for all the hard work.”

Jim Reames
NSWC Crane

“I would like to express my satisfaction with the support your company has provided to us at Navy Region Southwest. Our barriers have never worked more consistently. The level of professionalism and quality service is unsurpassed. I look forward to continued success working with LPS.”
